

Fiello™

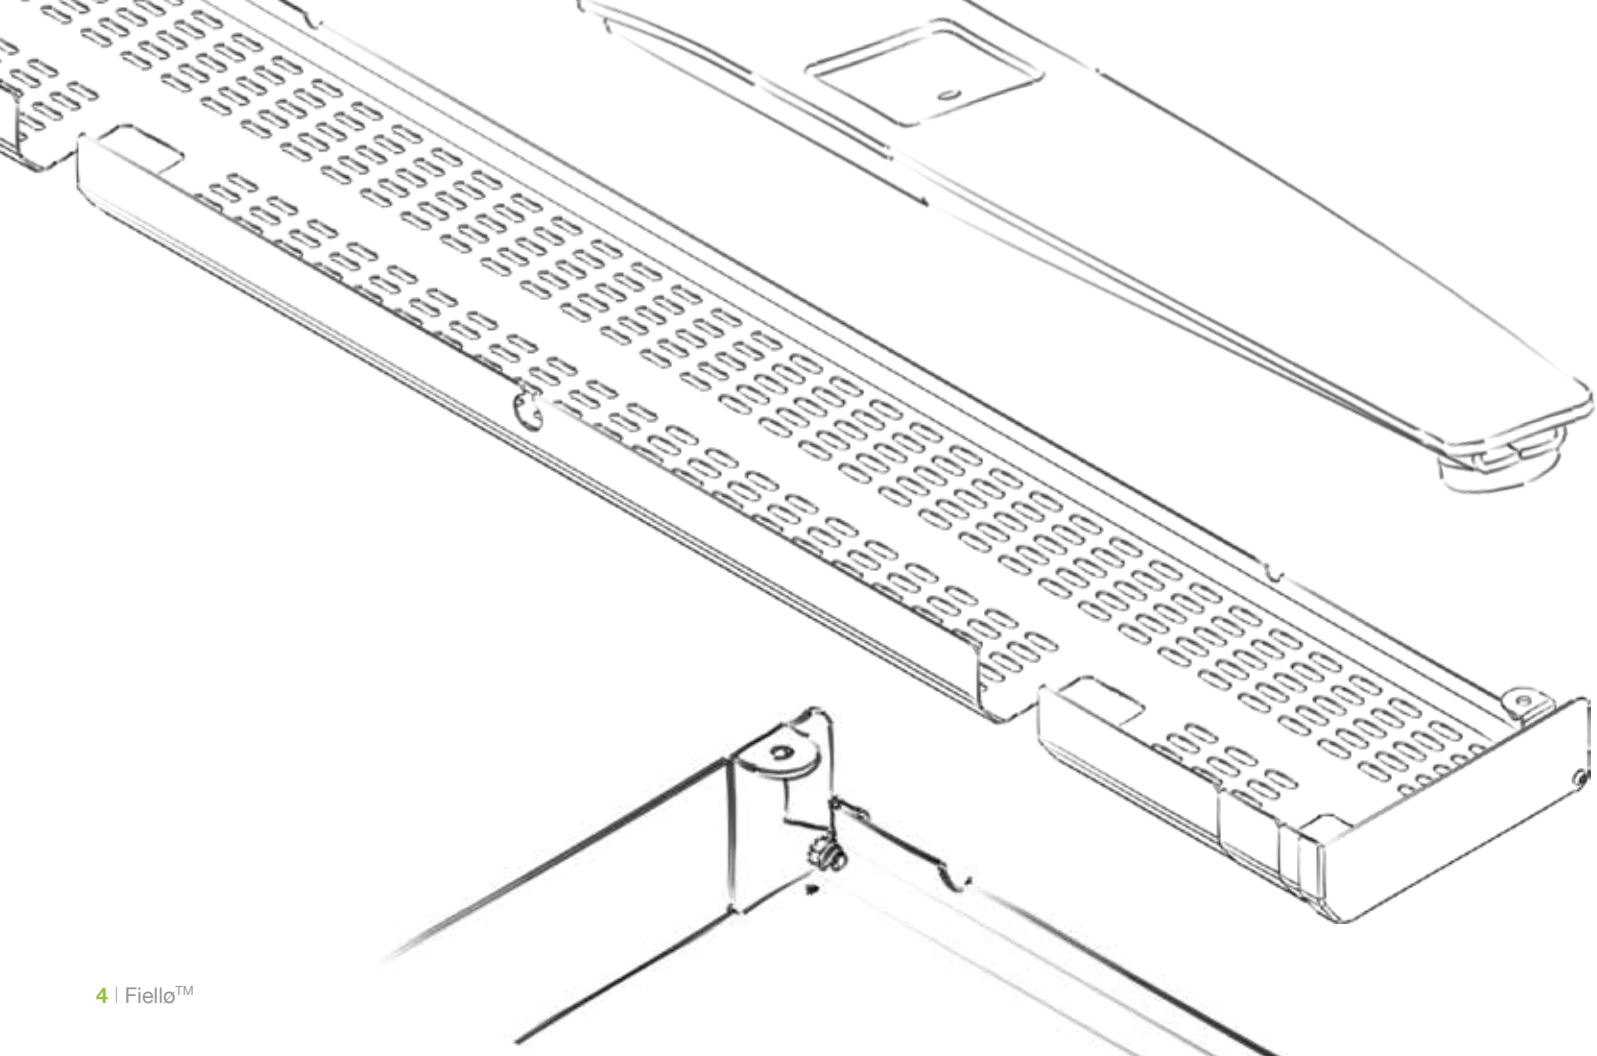

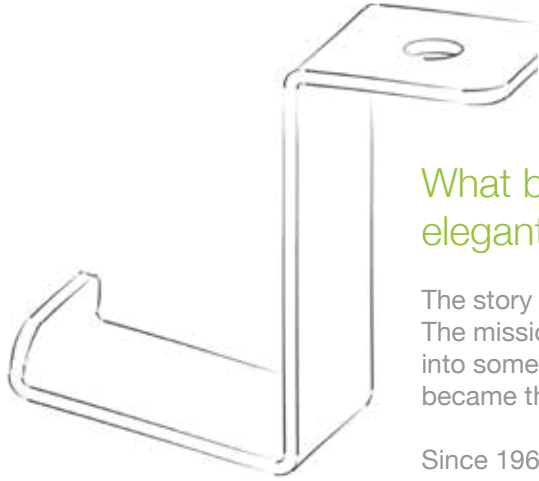

“

The contemporary office landscape is shifting. This new landscape requires a new approach to managing visual clutter, technology tools, and distractions. We all want a choice in how our work environment responds to our activities. It's not just about sitting vs. standing, it's about how to tailor my environment to my work style – to suit my posture, to suit my organization of technology tools, to suit my need to manage distractions. Fiellø™ is a thoughtful solution to how we really want to work.

What began as a sketch evolved into an elegant work of **design & craftsmanship.**

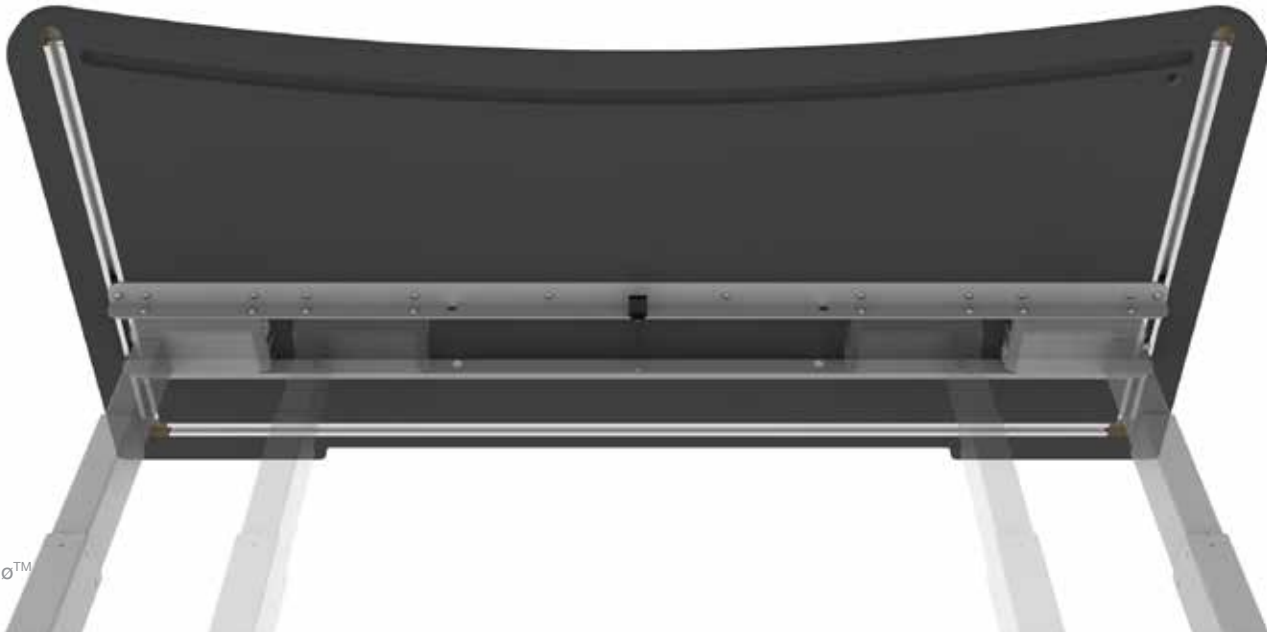

The story of Fiellø™ began one year before its completion. The mission to create an all-inclusive ergonomic solution grew into something greater. Perfectly engineered in flexibility, Fiellø became the future of the workplace.

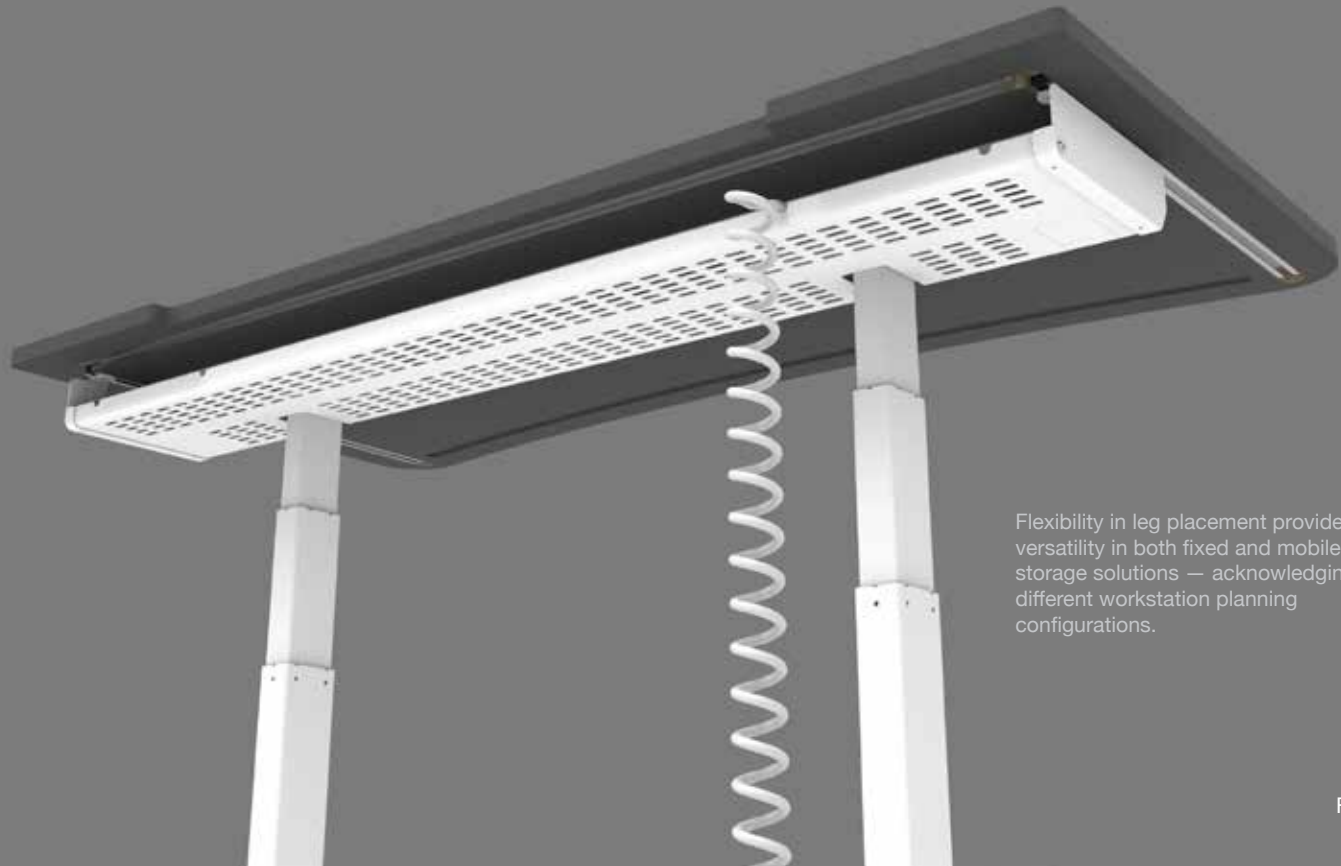

Since 1966, SiS Ergo has been mastering its craft and continues to hold tight to its Danish roots. Simplicity and functionality are the foundation behind the longest standing height adjustable table company in the industry. With our expertise in engineering and manufacturing, partnering with the leader in the design industry proved to be a powerful collaboration. We invite everyone to experience for themselves, what we consider to be, our best creation yet.

## A strong foundation

Designed for scalability and flexibility, a patent pending track system sits below the surface. As the brains behind Fiello™, these powerful rails are the foundation on which it stands. Double crossbars attach to the rails and allow for legs to reposition between inbound and outbound configurations. An ergonomic finger pull was strategically designed to be user friendly and assist in placement adjustment.

Flexibility in leg placement provides versatility in both fixed and mobile storage solutions — acknowledging different workstation planning configurations.

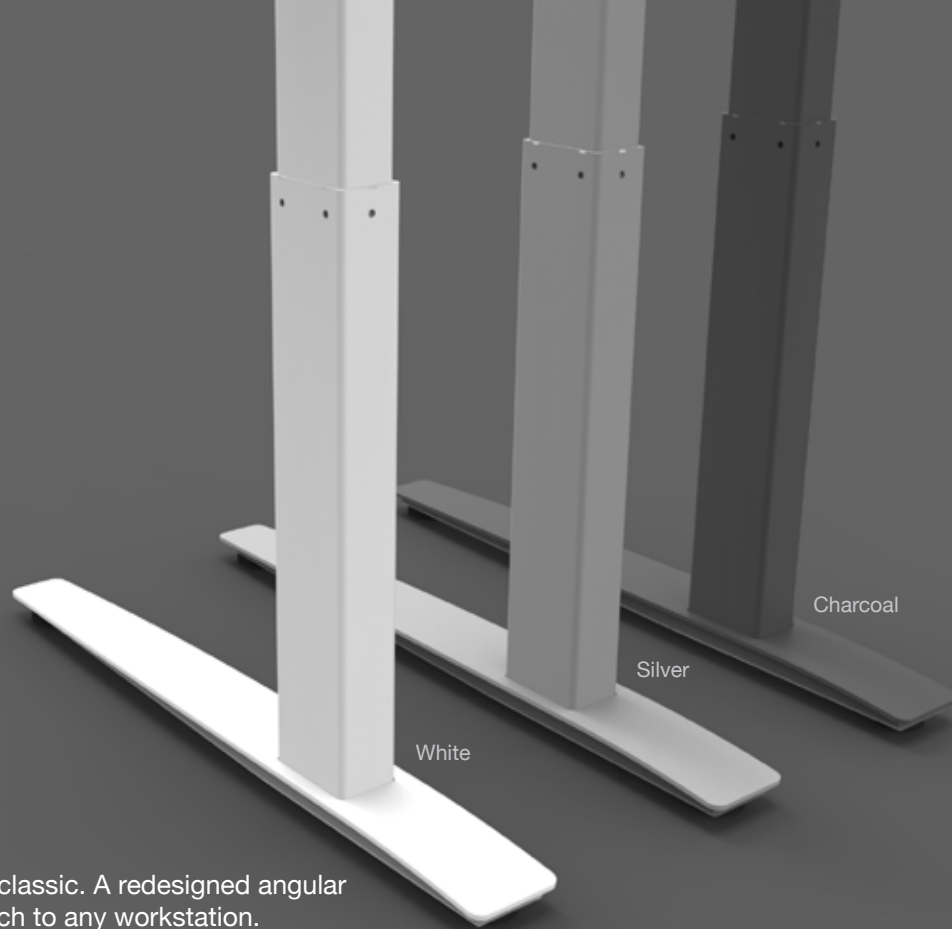

## Chaos becomes **art**

---

A wire management solution offers easy access and maximum power capacity. A dotted pattern allows for ventilation while providing a visual aesthetic below the surface. Inbound and outbound leg slots are perforated to support the multiple configurations Fiello™ has to offer.

## A new **angle**

Fiello™ offers a new look to a classic. A redesigned angular foot gives a sleek finishing touch to any workstation.

## Break the **mold**

Modesty and privacy screens offer an instant visual impact. Available in wood grains or solids, screens are available in two sizes, providing a privacy solution for all work environments.

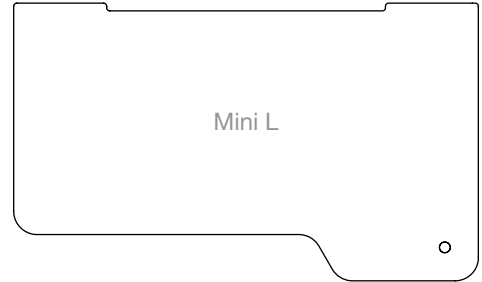

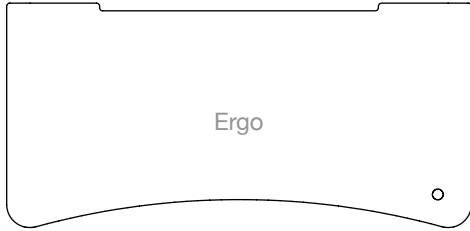

## Getting inked

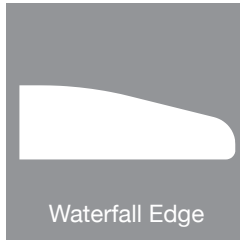

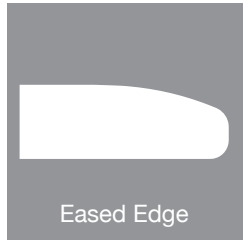

Powder coated tops offer the highest level of aesthetics while maintaining the smallest carbon footprint in the industry. The art of printing gives Fiellø™ the power to transform a solid into a wood grain, creating an environment that is unique and personal.

## WORKSURFACE SHAPES

## WORKSURFACE EDGES

Wood grain powder coat with bullnose edge.

Solid powder coat with waterfall edge.

## Low profile **high end**

Rounded corners and molded wood gives a new vibe to a storage drawer below the surface. Available in wood grain or solids for a polished, high-end look.

## Simple & **sophisticated**

A minimalist control switch is integrated into the worksurface for a clean look and sophisticated design.

## Thoughtfully detailed & **functional**

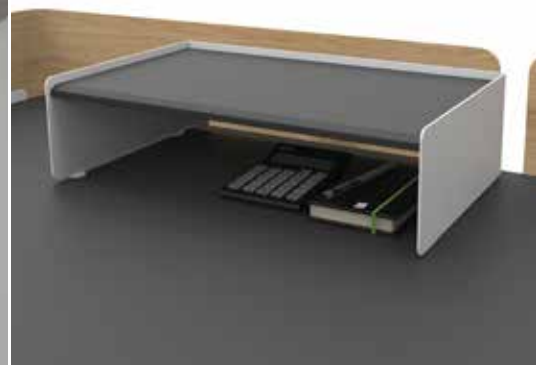

The cohesive design language of Fiellø™ continues in its unique desktop technology unit, featuring power outlets and the most advanced USB input on the market: a finishing touch catering to today's technology demands.

## Organize & maximize

The Fiellø™ track system offers unlimited support for additional accessories. A bag hook leaves a clean and open floor space, while a desktop shelf maintains organization and maximizes worksurface area.

## Form & **function**

Fiello™ transforms the ordinary into extraordinary. Normally preferred as a hidden feature, the power cord was embraced and recreated as a dynamic design, turning it into an accent piece.
